

What coevolution has done

8 sites; fitted and predicted distributions

Biotic selection on each partner

strength, 95 % interval, and test against none

Both differ from zero: reciprocal selection, not one-sided.

strength of coevolution $C = 1.1 \times 10^{-5} \text{ mm}^{-2}$

balance 0.18

one-sided balanced

The camellia and its weevil give the same verdict.
